TRADEMARKS

Paper No:20060817
Application No:10/773483
Filing Date: February 6,2004

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed. It should be brief but technically accurate and descriptive, preferably from two to seven words. See 37 CFR 1.72(a).

2. Applicant is required to update references to co-pending applications.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Watanabe et al (4399892) and McCarthy et al (5712456).

Watanabe et al teaches in figures 1-8, a dc motor 10a powered sheave 42 for elevator car 46 and counterweight 48. The motor is power by supply 18 and thyristors 16. An emergency generator 28 supplies power in a back-up situation..

Art Unit: 2837

Watanabe et al does not illustrate a flywheel back-up supply which provides power as needed (heavy load or regeneration).

McCarthy et al states in the Background of the Invention to be an improvement over Watanabe et al, teaches that it is advantageous to provide a flywheel type back-up system which can absorb excess power in a under-load situation as well as provide boosted power in a heavy load situation to satisfy maximum power requirements.

Thus, to utilize the system of McCarthy et al would have been an obvious engineering design choice to one of ordinary skill in the art to satisfy maximum load requirements.

As illustrated, McCarthy further illustrates the Tachometer 40, voltage detection 35 at the motor side, current detection 34 for use within controller 51 which controls the power to the hoist motor 16. McCarthy et al further states that various types of controllers may be utilized as long as the basic principle of the flywheel to provide and absorb excess energy is provided.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Enoki was states in instant specification. Fernkus, Born et al are cited to illustrate similar back-up power controllers for elevators.

A shortened statutory period for response to this action is set to expire 3 months from the date of this letter.

Failure to respond within the period for response will cause the application to become abandoned. 35 U.S.C. 133
